

**Syntax:****while( Test Cond ) :**

```

----->Statetment-1
----->Statetment-2
----->Statetment-n

```

Indentation  
Block of stmts

Other statements in Prog

Other statements in Prog

**Syntax:****while( Test Cond ) :**

```

----->Statetment-1
----->Statetment-2
----->Statetment-n

```

Indentation  
Block of stmts

else:

-----&gt;Else Block of Stmtts

Other Stmtts in Program

**Explanation:**

=&gt;here 'while' and 'else' are called Keywords

=&gt;Here Test Cond can be either True or False.

=&gt;If the Test Cond is True then PVM executes Indentation

Block of statements and once again PVM Control goes to

Test Cond. If once again Test Cond is True then PVM

executes Indentation Block of statements. This Process repeated for finite number of times until Test Cond becomes false.

=&gt;Once Test Cond becomes false, PVM executes else block of statements which are written else block(if present) and later executes Other Statements in Program.
